

Schematic surgical workflows for hip-preserving ONFH reconstruction

Conceptual figure for manuscript use; not to scale

A PVIBGT

vascularized iliac flap transfer without intentional hip dislocation

1

Iliac flap harvest

2

Pedicle-preserving transfer

3

Debridement with reduced hip

4

Vascularized flap implantation

B SHD-IBG

surgical dislocation followed by cancellous impaction bone grafting

1

Trochanteric osteotomy + graft harvest

2

Surgical hip dislocation

3

Necrotic bone removal

4

Impaction grafting + fixation

Mechanistic distinction: PVIBGT emphasizes pedicle perfusion and structural iliac support; SHD-IBG emphasizes open exposure, lesion clearance and mechanically packed cancellous graft support.
